

Class 3 Computer Reading

Introduction to Computers

Computers are electronic machines.
They help people perform many tasks quickly.
Computers are used in homes, schools, and offices.
They save time and effort.

History of Computers

Early computers were very large machines.
Modern computers are smaller and faster.
Computers have improved over time.
Technology continues to develop every year.

Parts of a Computer

A computer has different important parts.
The monitor displays information.
The keyboard is used for typing.
The mouse helps us control the pointer.

Input and Output Devices

Input devices help us enter data into computers.
Keyboard and mouse are input devices.
Monitors and printers are output devices.
Output devices show results from the computer.

Storage Devices

Storage devices save information and files.
Hard disks store large amounts of data.
USB drives are portable storage devices.
Storage keeps data safe for future use.

Uses of Computers

Computers are used in schools for learning.
Doctors use computers in hospitals.

Banks use computers to keep records.
Computers help people communicate worldwide.

Operating a Computer

A computer should be started carefully.
We use the power button to turn it on.
Programs help us perform different tasks.
Computers should be shut down properly.

Keyboard Skills

Typing is an important computer skill.
The keyboard has alphabet and number keys.
Practice improves typing speed.
Good typing helps complete work faster.

Mouse Skills

The mouse controls movement on the screen.
Clicking selects items.
Dragging moves objects.
Double-clicking opens programs and files.

Drawing and Painting

Paint programs help children draw pictures.
Computers can be used to color artwork.
Students can create shapes and designs.
Drawing on computers is fun and creative.

Educational Games

Educational games help students learn new things.
Some games improve math and language skills.
Games make learning interesting.
Children should use games wisely.

The Internet

The internet connects millions of computers.
People use it to search information.

Students can learn through online resources.

The internet should be used safely.

Email and Communication

Email helps people send messages online.

Messages travel quickly through the internet.

People use email for school and office work.

Online communication saves time.

Computer Safety

Computers should be handled carefully.

Hands should be clean while using computers.

Food and drinks should stay away from computers.

Proper care keeps computers working well.

Computer Lab Rules

Students should follow lab instructions.

Computers must be used responsibly.

Do not touch wires and plugs.

Respect school equipment.

Technology Around Us

Technology is part of daily life.

Mobile phones and computers are common technologies.

Technology makes communication easier.

People use technology at home and work.

Smart Machines

Computers are smart machines.

They process information quickly.

Smart machines help people save time.

Many modern machines use computers.

Learning with Computers

Computers help students learn effectively.

Teachers use presentations and videos.

Educational software improves learning.

Technology makes education more interesting.

Introduction to Coding

Coding gives instructions to computers.

Programs are made using coding languages.

Simple coding teaches problem-solving skills.

Children can learn coding step by step.

Future Technology

Technology continues to improve every year.

Robots and smart devices are becoming common.

Future computers may become even faster.

Technology will continue helping people worldwide.
