

Class 4 Computer Reading

Introduction to Computers

Computers are electronic devices used for many purposes.

They help people work faster and more accurately.

Computers are used in schools, hospitals, banks, and homes.

Modern life depends heavily on computers.

Generations of Computers

Computers have changed over many years.

Early computers were large and slow.

Modern computers are smaller and more powerful.

Each generation improved technology.

Hardware and Software

Hardware means the physical parts of a computer.

Software means programs and applications.

Both hardware and software are important.

A computer cannot work without software.

Input and Output Devices

Input devices help users enter data.

Keyboard, mouse, and scanner are input devices.

Monitors and printers are output devices.

Output devices show the results of computer work.

Storage Devices

Storage devices save information and files.

Hard disks can store large amounts of data.

USB drives are portable storage devices.

Cloud storage stores files online.

Operating Systems

An operating system controls computer functions.

Windows and Linux are examples of operating systems.

The operating system helps run programs.
It also manages files and devices.

Word Processing

Word processors help people create documents.
Students use word processors for assignments.
Text can be edited and formatted easily.
Microsoft Word is a popular word processor.

Presentation Software

Presentation software helps create slides.
Slides can include text, pictures, and charts.
Teachers use presentations in classrooms.
Presentations make learning interesting.

Spreadsheets

Spreadsheets organize data in rows and columns.
They are useful for calculations.
Microsoft Excel is spreadsheet software.
Businesses use spreadsheets to manage records.

Internet and Web Browsing

The internet connects computers worldwide.
Web browsers help people access websites.
Students use the internet for research.
Safe internet use is very important.

Email Communication

Email allows people to send messages online.
Emails are fast and convenient.
People can attach files to emails.
Email is widely used in schools and offices.

Computer Networks

A computer network connects multiple computers.
Networks allow sharing information and resources.

Schools and offices use computer networks.

The internet is the largest network.

Computer Safety

Computers should be handled carefully.

Strong passwords protect important information.

Viruses can damage computers.

Antivirus software helps keep computers safe.

Cyber Safety

People should stay safe online.

Personal information should not be shared with strangers.

Students should use trusted websites.

Cyber safety protects users from online dangers.

Introduction to Coding

Coding gives instructions to computers.

Programs are written using programming languages.

Coding helps develop problem-solving skills.

Children can learn simple coding activities.

Robots and Artificial Intelligence

Robots are machines controlled by computers.

Artificial intelligence helps machines think smartly.

Robots can work in factories and hospitals.

AI is becoming common in modern technology.

Uses of Computers in Different Fields

Computers are used in education.

Doctors use computers in hospitals.

Banks use computers to manage accounts.

Scientists use computers for research.

Digital Learning

Digital learning uses technology for education.

Students watch videos and use online lessons.

Educational apps help students practice skills.
Technology makes learning more interactive.

Future Technology

Technology continues to improve every year.
Smart devices are becoming more advanced.
Future computers may become even faster.
Technology will shape the future of society.

Responsible Use of Technology

Technology should be used wisely.
Too much screen time can affect health.
Students should balance study and play.
Responsible use of technology is important.
