

Class 3 Math Reading

Large Numbers

Large numbers help us count bigger quantities.

We can read and write numbers up to 10,000.

Each digit has a place value.

Large numbers are used in daily life.

Place Value and Expanded Form

Place value tells the value of each digit.

Expanded form breaks numbers into parts.

4,562 can be written as $4000 + 500 + 60 + 2$.

Place value improves number understanding.

Addition and Subtraction

Addition combines numbers together.

Subtraction means taking away.

Borrowing and carrying help solve problems.

These operations are useful in daily life.

Multiplication

Multiplication is repeated addition.

Tables help solve multiplication quickly.

We multiply numbers to find totals.

Multiplication saves time in calculations.

Division

Division means sharing equally.

It is the opposite of multiplication.

Division helps split things fairly.

Remainders sometimes appear in division.

Fractions

Fractions show equal parts of a whole.

One-half means one out of two equal parts.

One-fourth means one out of four parts.
Fractions are used in cooking and sharing.

Decimals

Decimals show parts of numbers.
A decimal point separates whole numbers and parts.
0.5 means half.
Decimals are used in money and measurement.

Geometry and Shapes

Geometry studies shapes and space.
Triangles, squares, and circles are shapes.
Shapes have sides, corners, and angles.
Geometry helps us understand designs.

Perimeter

Perimeter is the distance around a shape.
We add all sides to find perimeter.
Perimeter is measured in units.
It helps measure boundaries.

Measurement

Measurement tells length, weight, and capacity.
Meters measure length.
Kilograms measure weight.
Liters measure liquids.

Time

Time helps us plan activities.
Clocks and calendars measure time.
There are 24 hours in one day.
Minutes and seconds are smaller units of time.

Money

Money is used to buy goods and services.
Coins and notes have different values.

Math helps count and save money.

People use money every day.

Patterns and Sequences

Patterns follow a repeated order.

Number sequences help predict numbers.

Patterns improve logical thinking.

Math patterns appear in nature too.

Data and Graphs

Data means collected information.

Graphs and charts organize data clearly.

Bar graphs compare information visually.

Data helps people make decisions.

Word Problems

Word problems use math in real-life situations.

Careful reading helps solve problems.

Addition, subtraction, multiplication, and division are used.

Practice improves problem-solving skills.

Even and Odd Numbers

Even numbers divide equally by 2.

Odd numbers cannot divide equally by 2.

8 is an even number.

7 is an odd number.

Lines and Angles

Straight lines go in one direction.

Angles form when two lines meet.

Some angles are small and some are large.

Geometry uses lines and angles.

Capacity and Volume

Capacity shows how much a container can hold.

Volume measures space inside an object.

Liters measure liquids.

Capacity is important in daily life.

Symmetry

Symmetry means both sides look the same.

Butterflies show symmetry.

Shapes can have lines of symmetry.

Symmetry appears in art and nature.

Fun with Mathematics

Mathematics is useful in daily life.

Math improves thinking and problem-solving.

We use math at school, shops, and homes.

Learning math can be fun and exciting.
