

Class 4 Math Reading

Whole Numbers

Whole numbers are counting numbers including zero.

They help us count and measure quantities.

Large whole numbers are used in daily life.

Place value helps us understand large numbers.

Factors and Multiples

Factors divide a number exactly.

Multiples are formed by multiplying numbers.

Every number has factors and multiples.

Factors and multiples help solve math problems.

Prime and Composite Numbers

Prime numbers have only two factors.

Composite numbers have more than two factors.

2, 3, and 5 are prime numbers.

4, 6, and 8 are composite numbers.

Fractions

Fractions represent parts of a whole.

Equivalent fractions have the same value.

Fractions can be added and subtracted.

Fractions are useful in daily life.

Decimals

Decimals represent parts of numbers.

A decimal point separates whole numbers and fractions.

Decimals are used in money and measurement.

We can add and subtract decimals.

Addition and Subtraction

Addition combines numbers together.

Subtraction means taking away.

Large numbers can be added and subtracted.

Math operations help solve real-life problems.

Multiplication and Division

Multiplication is repeated addition.

Division means sharing equally.

Tables make multiplication easier.

Division helps solve distribution problems.

Geometry

Geometry studies shapes and space.

Shapes have sides, corners, and angles.

Triangles, circles, and rectangles are common shapes.

Geometry is used in construction and design.

Angles

Angles are formed when two lines meet.

Angles are measured in degrees.

Right angles measure 90 degrees.

Angles are important in geometry.

Perimeter and Area

Perimeter is the distance around a shape.

Area measures the surface inside a shape.

We use formulas to calculate area and perimeter.

These measurements are useful in daily life.

Measurement

Measurement tells length, weight, and capacity.

Meters measure distance.

Kilograms measure weight.

Liters measure liquids.

Time

Time helps organize daily activities.

There are 60 minutes in one hour.

Calendars show days, weeks, and months.

Time management is important.

Money

Money is used for buying and selling.

Math helps calculate prices and change.

People save money for future needs.

Banks help keep money safe.

Patterns and Sequences

Patterns follow a repeated rule.

Sequences help predict numbers.

Math patterns improve logical thinking.

Patterns appear in nature and art.

Data Handling

Data means collected information.

Charts and graphs organize data clearly.

Bar graphs compare information visually.

Data helps people make decisions.

Symmetry

Symmetry means equal balance on both sides.

Shapes can have one or more lines of symmetry.

Butterflies and flowers show symmetry.

Symmetry is used in art and design.

Lines and Shapes

Straight and curved lines form shapes.

Parallel lines never meet.

Intersecting lines cross each other.

Lines are important in geometry.

Volume and Capacity

Volume measures space inside an object.

Capacity tells how much a container can hold.

Liters measure liquid capacity.

Volume and capacity are useful in daily life.

Problem Solving

Math problems improve thinking skills.

Word problems use real-life situations.

Careful reading helps solve problems.

Practice improves problem-solving ability.

Importance of Mathematics

Mathematics is useful in everyday life.

People use math in shopping and business.

Math improves logical thinking.

Learning math helps solve practical problems.
