

Class 4 Science Reading

Cells and Living Things

All living things are made of cells.

Cells are very tiny building blocks of life.

Plants and animals are made of many cells.

Cells help living things grow and survive.

Human Body Systems

Our body has different systems.

The digestive system helps digest food.

The respiratory system helps us breathe.

The circulatory system moves blood in the body.

Plants and Photosynthesis

Plants make their own food.

Leaves use sunlight, water, and air.

This process is called photosynthesis.

Photosynthesis helps plants grow.

Animals and Adaptation

Animals adapt to survive in their habitats.

Camels can live in deserts.

Polar bears stay warm in cold places.

Adaptations help animals stay safe.

Food Chain

A food chain shows how living things get food.

Plants are producers.

Animals that eat plants are consumers.

Every living thing depends on another.

States of Matter

Matter exists in three states.

Solids keep their shape.

Liquids flow easily.

Gases spread in the air.

Force and Energy

Force helps objects move or stop.

Energy helps us do work.

Electricity gives energy to machines.

The sun is a natural source of energy.

Light and Reflection

Light helps us see objects.

Mirrors reflect light.

Reflection forms images in mirrors.

Shiny surfaces reflect more light.

Sound and Vibrations

Sound is produced by vibrations.

We hear sounds with our ears.

Loud sounds can harm hearing.

Different objects make different sounds.

Water Cycle

The water cycle is a natural process.

The sun heats water and makes vapor.

Clouds form in the sky.

Rain falls back to Earth.

Weather and Climate

Weather changes daily.

Climate is the usual weather of a place.

Some places are hot and dry.

Some places are cold and snowy.

Natural Resources

Natural resources come from nature.

Water, air, and soil are natural resources.

People use resources every day.
We should not waste natural resources.

Pollution and Environment

Pollution harms the environment.
Smoke causes air pollution.
Plastic waste pollutes land and water.
We should keep the environment clean.

Electricity

Electricity powers many devices.
Fans and lights need electricity.
Batteries store electricity.
We should use electricity carefully.

Simple Machines

Simple machines make work easier.
Levers and pulleys are simple machines.
Machines save time and effort.
People use machines every day.

Earth and Space

Earth is part of the solar system.
The moon moves around Earth.
Stars shine in the night sky.
Astronauts explore space.

Healthy Lifestyle

Healthy habits keep us fit.
Exercise strengthens our body.
Healthy food gives energy.
Sleep helps our body rest.

Safety and First Aid

Safety rules prevent accidents.
First aid helps injured people quickly.

Bandages cover small cuts.

Adults should help during emergencies.

Recycling and Waste Management

Recycling reduces waste.

Paper, glass, and plastic can be recycled.

Waste should be thrown in bins.

Clean surroundings keep us healthy.

Importance of Trees

Trees give us oxygen.

They provide shade and fruits.

Birds make nests in trees.

We should plant more trees.
