

Class 5 Science Reading

Human Body Systems

The human body has many systems that work together.

The digestive system helps break down food.

The respiratory system helps us breathe.

The circulatory system carries blood throughout the body.

Nutrition and Balanced Diet

A balanced diet keeps us healthy and active.

Fruits and vegetables provide vitamins.

Proteins help our body grow strong.

We should avoid eating too much junk food.

Plants and Their Functions

Plants are important for life on Earth.

Roots absorb water from the soil.

Leaves prepare food through photosynthesis.

Flowers help plants produce seeds.

Reproduction in Plants

Plants reproduce through seeds.

Flowers produce seeds after pollination.

Seeds grow into new plants.

Water and sunlight help seeds grow.

Animals and Ecosystems

Animals live in different ecosystems.

Forests, deserts, and oceans are ecosystems.

Animals depend on plants and other animals.

Every ecosystem must stay balanced.

Food Chains and Food Webs

A food chain shows how energy moves in nature.

Plants are producers because they make food.

Herbivores eat plants.

Carnivores eat other animals.

Matter and Its Properties

Matter is anything that has mass and takes space.

Solids have a fixed shape.

Liquids flow and take the shape of containers.

Gases spread freely in the air.

Changes in Matter

Matter can change from one state to another.

Ice melts into water.

Water changes into steam when heated.

Cooling changes steam back into water.

Force and Motion

Force can move or stop objects.

Pushes and pulls are forces.

Motion happens when an object changes position.

Gravity pulls objects toward Earth.

Energy Around Us

Energy helps us do work.

The sun is a major source of energy.

Electricity powers many machines.

Food gives energy to our body.

Light and Shadows

Light travels in straight lines.

Opaque objects block light and form shadows.

Transparent objects let light pass through.

Shadows change size during the day.

Sound and Hearing

Sound is produced by vibrations.

Sound travels through air.

Our ears help us hear sounds.
Very loud sounds can damage hearing.

Electricity and Circuits

Electricity flows through circuits.
A circuit needs a power source.
Bulbs glow when the circuit is complete.
Wires help electricity move.

Earth and Solar System

Earth is part of the solar system.
The sun is a star at the center.
Planets move around the sun.
The moon moves around Earth.

Natural Disasters

Earthquakes and floods are natural disasters.
Strong winds can cause storms.
Natural disasters can damage homes and roads.
People should stay safe during disasters.

Weather and Climate

Weather changes every day.
Climate is the usual weather of a region.
Hot places have warm climates.
Cold places have cool climates.

Pollution and Conservation

Pollution harms the environment.
Air pollution comes from smoke and gases.
Water pollution makes rivers dirty.
We should conserve nature and reduce pollution.

Renewable and Non-Renewable Resources

Some resources can be used again and again.
Sunlight and wind are renewable resources.

Coal and oil are non-renewable resources.

We should save natural resources.

Technology in Daily Life

Technology helps people in many ways.

Computers and mobile phones make communication easy.

Machines save time and effort.

Technology should be used wisely.

Healthy Lifestyle and Exercise

Exercise keeps our body healthy and active.

Healthy food gives strength and energy.

Proper sleep helps our body rest.

Good habits keep us fit and happy.
